DIELECTRIC FILTER, ANTENNA SHARING DEVICE, AND COMMUNICATION DEVICE

ABSTRACT OF THE DISCLOSURE

An outer conductor, an input terminal electrode, an output terminal electrode, a voltage controllable terminal electrode, and two separated electrodes are formed on the outer face of a dielectric block.

Furthermore, on the upper face of the dielectric block, PIN diodes which are voltage controllable reactance elements, and inductors for voltage-controlling the PIN diodes, and a coupling adjustment capacitor are mounted. Frequency shifting capacitors are formed by generation of electrostatic capacitances between the separated electrodes and the inner

conductors of the resonance holes, respectively.
